MultiTracks.com, Austin, TX/Remote — Front End Team Lead

February 2023 - Present

- Developed and maintained full-stack UI and business logic across C#, SQL, HTML, TypeScript, Vue.js, and SASS in a production codebase serving eight localized markets
- Integrated internal and external APIs for data retrieval, user state management, and third-party service connectivity across multiple product surfaces
- Modernized legacy codebase by converting jQuery to TypeScript, improving long-term maintainability and enforcing consistent coding standards across the codebase
- Redesigned the pricing flow to support three new product launches, improving UX and enabling the business to expand its product ecosystem
- Built and maintained custom CMS tooling that empowered branding, product, and sales teams to self-serve landing page creation, reducing development bottlenecks
- Managed content, media assets, and translations for eight localized website versions using Azure Blob Storage and a custom CMS
- Built a C# console application that automated company-wide email signature generation, eliminating a fully manual process and reducing signature creation time to seconds per employee
- Connected a Microsoft Forms pipeline to the console app to collect and process user-specific field responses, then deployed finalized signatures org-wide via Group Policy Objects
- Architected a multi-platform communications aggregator that consolidates Figma, Jira, and Microsoft Teams activity into a live Confluence document organized by date, giving project stakeholders a single source of truth across tools
- Built a Microsoft Teams utility account integration that joins channels, chats, and meetings to capture and route communications using a trigger hashtag system, requiring minimal workflow changes from end users
- Integrated the Anthropic API to generate on-demand summaries of meetings and message threads, surfacing project context without requiring users to manually parse cross-platform history
- Served as one of two frontend engineers with full ownership of the entire codebase, independently driving both feature development and maintenance
- Scoped and architected development plans for new projects, translating business requirements into structured technical roadmaps and Jira issue hierarchies
- Designed and implemented custom Jira issue forms tailored to department-specific workflows, improving issue reporting accuracy and cross-team communication
- Established and standardized documentation across UI components, styling systems, CMS pages, and data tables, creating a single source of truth for the frontend team
- Partnered with backend, product, and design teams in an Agile environment to deliver user-focused features on deadline
- Actively contributed to code reviews, championing cleaner syntax, performance improvements, and consistent standards across the team
- Voted Ideal Team Player 2024 by company peers
- Ranked in the top 10% of the development team across all quarters of 2025 for output volume, QA pass rate, and issues tested

Languages & Frameworks: TypeScript, JavaScript, Vue.js/Vuex, C#, HTML, SASS, SQL, jQuery, .NET, Node.js, Express, Bootstrap, Tailwind

Tools & Platforms: Microsoft Graph API, Claude Code, Azure Blob Storage, Google Analytics, Facebook Pixel, Confluence, Git, Figma, Jira, Microsoft SQL Server, Supabase, MongoDB
